

# 2013-2014

## Annual Report and Verification Reports for commercial fisheries allocations

TURBOT	0A	550 MT
TURBOT	0B	450 MT
SHRIMP SFA 2 (bor.)		250 MT

Prepared for:

**Nunavut Wildlife Management Board**

July 2014

## I. Executive Summary - Public

### 1. CONTEXT

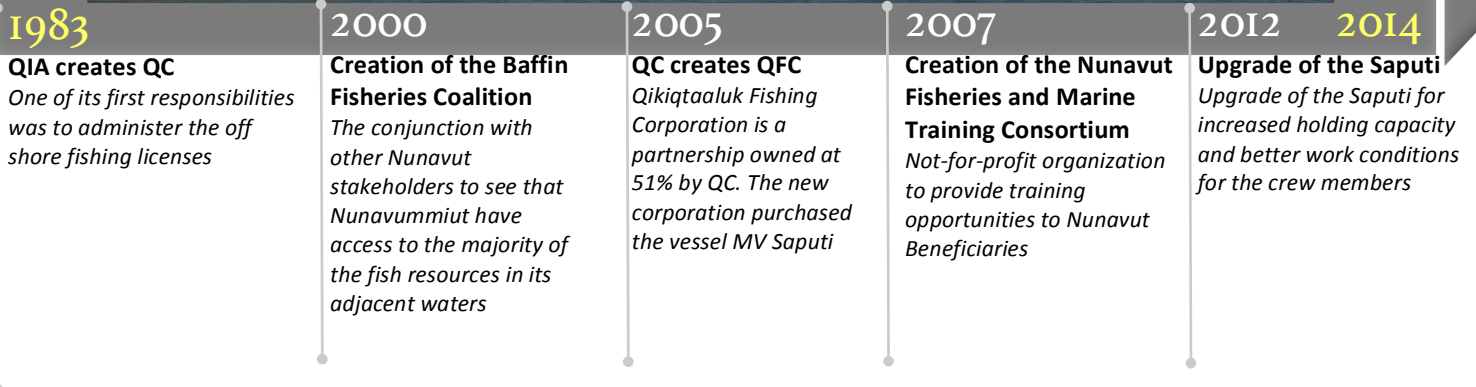

As holder of commercial fisheries allocations and in response to the *Nunavut Wildlife Management Board* (NWMB) call for Annual Reporting, **Qikiqtaaluk Corporation (QC)**, the **Inuit Birthright Development Corporation that is 100% owned by the Qikiqtani Inuit Association (QIA)**, is pleased to present its Annual Report.

In the following pages, QC will highlight its history in the fishing industry, achievements for 2013-2014 regarding corporate and operational goals as well as QC's commitments for the future. QC will also present its harvesting results for turbot and shrimp quota allocations, 100% harvested; and the success achieved at leasing additional quota allocations from other Nunavut licence holders. This win-win situation assists the other Nunavut licence holders to harvest their excess quota allocations while QC, through Qikiqtaaluk Fisheries Corporation (QFC) achieves results that are closer to its maximum harvesting capacity.

### 2. QC - BUILDING THE NUNAVUT FISHING INDUSTRY SINCE 1983

Qikiqtaaluk Corporation (QC) has been involved in the fisheries industry since 1983 when the Qikiqtani Inuit Association (formerly the Baffin Region Inuit Association) formed QC to undertake for profit activities on behalf of the Inuit of the region. More than 30 years later, QC is still fulfilling that role, providing direct employment and financial opportunities for Inuit within and outside the Qikiqtani Region.

The Timeline below presents an overview of QC's role in the history of the Nunavut Fishing Industry.

Over the years, QC and QFC – QC’s majority-owned fishing company – have built stronger Inuit capacity in the fisheries industry bringing significant benefits to individual Nunavummiut and the fisheries industry; it also leverages a portion of the revenue contributing to several other economic sectors in Nunavut.

**NOTABLE FACTS**

<b>1.</b>	<i>QC and QFC are both self-sustaining companies based in Iqaluit.</i>
<b>2.</b>	<i>The vessel, the MV Saputi, is registered in Nunavut.</i>
<b>3.</b>	<i>QC is able to provide significant leverage in other economic sectors from earnings attributed to fisheries.</i>
<b>4.</b>	<i>QC’s involvement in the fishery industry does not draw on public money either directly or indirectly through the shareholder unlike other Nunavut operators.</i>
<b>5.</b>	<i>Royalty and profit income along with crew earnings are the most important direct benefits for Nunavut and Nunavummiut.</i>

QC is the **only regional development corporation that is able to stand alone without financial contributions** from its Regional Inuit Organization. The profits of QC activity in fisheries generate wealth and employment for the Inuit of the region. In addition to the direct investment in fisheries, these profits support or provide:

- Annual dividends to QIA for community Initiatives programs*
- Environmental clean-up programs providing training and hundreds of jobs to Beneficiaries*
- Investment in real estate development and management in Nunavut; going from one person office in leased space to owning over \$100,000,000 in property across all of its companies. QC has the only fully BOMA certified Inuit Real Estate Director in Nunavut.*
- Ability to participate in other resource development, most notably the Baffinland Iron Mines; where the skills learned on the clean-up projects are now being applied to camp services. Employees are hired from numerous communities*
- Infrastructure development, including marine infrastructure such as*
  - The floating dock in Pangnirtung,*
  - A feasibility study for the dock in Qikiqtarjuaq,*
  - The bridge built in the Clyde River area,*
  - Preliminary development of a deep-water port facility in Rankin Inlet*
- Lead in the development Inuit Owned Lands as commercial ventures*
- Research and development of affordable housing initiatives and clean energy projects*
- Provision of the first job a student has, where they learn what it is like to be in the work force*
- Distribution of a minimum of \$50,000 a year to youth, cultural and community programs across the region*
- A record of 83% Inuit employment over all of its companies and in every type of position from labourer to President and CEO*

In 2013/2014, QC has worked toward developing markets in Russia and China, which resulted in increased interest for these products and an increase in sales.

*ii. Nunavut Economy*

QC’s mission is to facilitate the growth of the Nunavut economy for the benefit of all Nunavummiut but more specifically to generate wealth for Inuit in the region. Each year, QC moves forward in achieving this goal. The recent down turn in the economy did not devastate the Corporation because of the cushion provided by the diversification in investment. The following projects are example of QC’s accomplishments in 2013-2014.

<b>1.</b>	<b>Cape Dyer</b> <i>Environmental Remediation Project (over 70% Inuit employment and \$3,879,175.29 paid in salaries to Beneficiaries)</i>
<b>2.</b>	<b>Mary River Project</b> <i>Camp Services (70% Inuit employment)</i>
<b>3.</b>	<b>Nunavut Media Arts Centre (NMAC), Iqaluit</b> <i>Construction of the NMAC is currently on-going in Iqaluit</i>
<b>4.</b>	<b>Industrial Warehouse, Iqaluit</b> <i>QC invested and purchased a warehouse facility in Iqaluit for \$1.2M.</i>
<b>5.</b>	<b>Scholarship Program for post-secondary studies</b> <i>QC approved a \$30,000 scholarship program for Inuit students in finance, business, environmental services, IT, etc.</i>

**f. Governance and Stewardship**

QC maintains openness, transparency and accountability in all its operations. With 12 consecutive years of profitable growth, QC continues to create meaningful economic, employment and career development opportunities for Inuit.

QC’s goal in the stewardship plan is to maintain full compliance with all the requirements of the industry including those of the NWMB’s and to aim for new higher standards. As an example, MV Saputi was the first vessel in Atlantic Canada to adopt the United Nations **“Montreal Protocol on Substances that Deplete the Ozone Layer”**. Once again, the companies have attained their goal to keep QC and QFC in compliance with all the requirements of responsible stewardship.

**4. FUTURE COMMITMENTS**

The QC vision for the future is to increase its turbot and shrimp quota in order to maximise the capacity of its vessel, the MV Saputi and /or to find new products. An increase in quotas would lead to more job opportunities and economic benefits for all the Nunavummiut. QC wants to continue working with the NFMTC to further the Nunavummiut employment, training, and retention rates.

With respect to research, development and overall investment, QC is looking to implement the new solutions for marine equipment studied in the recent years and continue to bring contributions to the fishing industry and indirectly to the overall economy of Nunavut. Participation in the fisheries industry is the platform from which current and future success achieved and with any growth in quotas, QC will be capable of achieving even more.
